Ovation

Ovation

The launch of the baby lock Ovation has set new standards in the field of coverlock machines. No need to laboriously follow any threading points. Forget about loose threads and all the associated tangle and frustration. All thanks to the fully automated jet-air threading system. A knee lift lets you change the presser foot position without taking your hands off the fabric. Both the marked presser foot pressure control and the presser foot lifter are within easy reach of the sewing area for fuss-free adjustments.

The Ovation offers another convincing advantage: you can vary its sewing speed. The adjustable control determines the maximum speed, allowing you to focus fully on your sewing project whenever intricate work requires high precision and your full attention.

Thanks to the convenient changeover from overlock to coverstitch and vice versa, you have much more time to try out the numerous stitch options that can be implemented neatly and easily using the automatic thread delivery feature.

... convinces both beginners and professionals

The baby lock brand has been appreciated for its ease of use for decades. Both beginners and advanced sewers can enjoy the machines' special technical features and all of the possibilities they offer right from the very start. Whether the direct start or the different setting variants, everybody loves the outstanding sewing results irrespective of the fabric and thread used.

Why a baby lock?

All of the innovations that come with the baby lock machines combine clever and high-quality mechanical features. The machines do not require any computer technology, making them less prone to faults and extremely durable, and thus guaranteeing long-lasting sewing happiness.

The world's first overlock machine that was developed for household use was a baby lock. From the very beginning, the motto was: We at baby lock deliver only the highest quality to our customers, made in Japan. baby lock does not rely on mass production, making this product something very special.

Our machines are produced in a craft-like manufacturing facility in the north of Japan. The staff test every single machine for 20 minutes. More than 30 different seams are sewn to guarantee the high quality demands placed on this product before it is delivered to our customers.

The very important and sensitive loopers are polished, inspected, tested and fine tuned by hand. The aforementioned processes are only some examples of the many individual operations that are performed by our highly specialised staff.

Perfectly combined ... with random variety

Everything in its place

The Ovation's spacious accessory compartment can be unfolded without the cones changing their position. The thread configuration does not change and the seams do not lose their perfect look. You can leave the compartment open and use the included standard accessories while you are sewing. The compartment contains spare parts, tweezers and a brush with a needle insert, among other things.

Don't get wrapped around your own fingers ...

Smooth silk or heavy fabrics always seem to slip away from underneath the needle on your machine's work top at the most critical moments. The Ovation's knee lift gives you a „third hand“ that lets your knee change the presser foot position so that you don't have to take your hands off the sewing area. The extra wide throat provides enough space for even voluminous projects and can be combined with the optional extension table. Everything thus stays where it should be!

Frustrated and stressed? Never again!

Working with needle and thread requires a steady hand, a practised eye and a lot of patience when it comes to threading. This step is so difficult for some beginners that it takes the fun out of sewing, even before they try to work on their first piece of fabric. There's a much better way! Our sophisticated ExtraordinAir™ threading system solves this problem on its own, at the touch of a button with a jet of air. Off you go!

Experience infinite refinement ...

Creative ideas can only develop where there is enough free space for them to unfold. Sewing is a handicraft that offers you a high degree of individuality, letting you present your own personal brand and discover artistic diversity through an exchange with other sewing enthusiasts. This is exactly what we want to encourage!

We offer a versatile tool for any type of fabric. Thanks to the automatic thread delivery (ATD) system, even handling difficult fabrics becomes child's play as the machine always provides the correct setting to achieve an optimum sewing result. The thread quality is irrelevant. Whether a sturdy yarn or an ultra-thin thread, the seams look neat. The Ovation will convince you with its 87 different standard and fanciful decorative stitches. Our baby lock machine's special highlight is the wave seam. Give the machine a try!
